

Gayville-Volin Freedom Energy Co-op

brings you the

The Montemizer

By now everyone should realize the oil companies have taken us hostage, little by little one dime at a time. We pay an unreasonable price at the pump and our sons and daughters are dieing overseas to try and free us from our own financial demise.

**Would you like to increase the miles per gallon your vehicle is currently doing?
Without having to spend your next paycheck to do it?**

With the technology that I can share.

It's possible you could see, on the average,

a 30 to 65 percent increase in the mileage you're currently getting from your car.

There is documentation of some drivers seeing as high as 200 percent increase!

But let's back up for just a minute.

Hello, my name is Monte Davis. My wife Judy and I live at 308th street between Gayville and Volin, South Dakota. I am starting the **Gayville-Volin Freedom Energy Co-op**. My intent with the Co-op is to help people help themselves and others and save money doing it! How? By sharing (selling) what is excess. What is it you have that you have too much of? Food of any kind, clothing, equipment/machinery? I'll explain more about this idea later. For now I want to get right into what I am calling the Montemizer. That is the name for my bio-diesel processor and, it's what is being called the "water-4-gas" technology.

What is the water-4-gas technology? It's an idea, a proven idea, that has been around for years. But, it has been kept a secret because once this idea catches on the oil/gas companies might suffer. How? Because your car/truck/tractor/motor home/motor cycle - whatever has a gas or diesel engine on it - will not be burning as much fuel as before. With a Montemizer installed, you will gain **freedom** from the pump. Which means **freedom** from the oil wars.

How is this done? With water! Yes, that's right – water. By installing what is called a "Hydrogen Water Cell" you will see an increase in the fuel mileage your vehicle is getting. It's easy, it's simple and it's safe.

I have been making bio-diesel for some time now. I run it in two of my personal vehicles. My cost for bio-diesel runs between \$.82 per gallon to \$1.05 per gallon. Pretty good huh? I want to show more people how to do this. I have already helped several people get set up so that they can make bio-diesel themselves and I want to show you too. Doing so, however, means I'm making competition for myself for the raw product I need to make my bio-diesel. But that's OK. We are all given gifts. Gifts that were meant to be used to help others. And I want to help YOU!

That's also why am I doing this. To help my fellow man earn some **freedom**. This **freedom** will help free up some of the hard earned money that could and should be used to

better your life. Becoming free from the burden of gas companies will become a major way to help free up some of that hard earned money. If we're not having to spend as much at the pump, we'll have more money to spend on the important things we want and need.

As I mentioned, I have been making bio-diesel for some time. Even though the water-4-gas idea has been around for years and years, it's only recently that people's interest has increased. After spending quite a bit of time studying and understanding this technology, it's time to put it to work helping myself and you. I've installing this on my 4 vehicle and am in process of installing it on about 10 other cars around the area. I know and understand what is needed and how to go about getting the job done. Let me help you help yourself. It comes down to this. The common man, the little person, can dictate what happens next. We can not, and should not, count on the government to help us as individuals.

I will have the water cell units (WCU) you need available to sell to Co-op members as well as non-co-op members. Simple instructions will be included that will be easy to follow so that you can install a WCU on your personal vehicle. Or, if you don't feel comfortable doing it yourself, I will direct you to a mechanic, who is a member of the **Gayville-Volin Freedom Energy Co-op**, who will schedule a time to install it for you. This, of course, will add cost to your WCU. Everyone is invited to see this dynamic technology free and to get started thinking about how to help yourself. I did and I am saving thousands at the pump. Thousands, of dollars in 1 vehicle. I have 2 gas and 2 diesel vehicles. See for yourself what is out there. Go to

<http://montemizer.water4gas.hop.clickbank.net/>. Get these books and set yourself free. Like I did

If you want more information please call me. I can only include so much information on this paper and could no way answer all your questions. So please call. I am more than happy to show you a WCU and explain it and my bio-diesel plant. I can also give you more information concerning the **Gayville-Volin Freedom Energy Co-op**.

I believe, as the word gets out, the Co-op is going to become a living breathing entity that many people will want to get involved in. There will be a one-time fee of \$25 for membership in the Co-op. You will also need a valid E-mail address because that will be the main means of communication between members. A list of items for sale, needs and etc will be emailed to each member. Co-op activities will be dictated by the needs of the Co-op community. Being a member means not paying as much as non-members for the items that Co-op members will be listing for sale. (This includes the water-4-gas as well). So this means as a member, you must have two prices for an item you're selling. One price for Co-op members and a different price for non-members. We will also be making a community "for sale" list to post around the area.

For more information please contact Monte Davis;
